

editorial archive

Fully integrated archiving and retrieval system

Archiving is a key addition to the Pongrass Version 6 Editorial system. Archiving shares the same browser based interface as News Editor with the same zero installation design.

Fast Search

You can search on publication, edition, date run, key word, author etc. Full indexed text search is available on editorial content.

Automatic Archiving

After an edition has been paginated and marked for archiving, export to the archive database is scheduled.

Pictures, text and other story elements are exported, and registered in the archive. PDF pages are registered and linked to archived page elements. The full text index is generated as part of the archiving process.

The screenshot displays the NewsArchive web interface in a browser window. The top section shows a search bar and filters for 'Match part of the word', 'Match any word', and 'Full-Text Search'. Below this is a table of search results with columns for Name, Author, Issuedate, Desk, Edition, Section, Page, and Batch. The table lists various articles, including 'Bike Education', 'carer', 'EMMA B', 'CRAIG G', 'evacuate', 'exportfq', 'farmers kq', 'fash', 'green waste EW', 'GuyEB', and 'Kavanagh Room'. Below the table is a grid of article thumbnails with titles like 'Busiest in 10 years', 'Kidnap accused bailed', 'liquor', 'Farmers will be hit hard', 'INDULGE WITH JO KING', 'No decision on itinerary', 'City growth rate too fast', 'The Everywhere Sale', 'The reviver of beautiful singing', 'Euthanasia must not be legal', 'Why we need a 50m indoor pool', and 'Dyer's World Brazil's great green mystery'. The bottom section shows a detailed view of an article titled 'Legacy MR_P1' with a photo of a woman and a grid of related images. The interface includes a search sidebar, a main content area, and a footer with the Pongrass logo.

Requirements

Server

- Windows 2008 or 2012
- Sybase ASA or Microsoft SQL.
- 8Gb free RAM
- 1TB Free Hard Disk

Client

- Internet Explorer, Firefox or Chrome on OSX or Windows

Picture Archive

All pictures associated with a story are stored along with crop data from the Pongrass Editorial System. Picture browsing is quick and efficient using jpeg previews from the archive. Pictures can be found via story links or searches on IPTC data.

Features

- Browser based
- Comprehensive search criteria
- Full text index and search
- Archiving text, PDF pages, pictures and other page elements
- Supports News Editor picture crop

The screenshot shows the NewsArchive application in a web browser. The main window displays a search results table with columns: Name, Author, Issuedate, Desk, Edition, Section, Page, and Batch. The 'Crash' article is selected. A modal dialog titled 'Please select the sub-components to restore.' is open, showing a list of sub-components with checkboxes, names, types, and expiry dates. The dialog includes 'Restore' and 'Cancel' buttons.
